Oftentimes groups of ostriches will graze among giraffes, zebras, gnus, and antelopes. Their presence is useful because they alert other animals when danger is near. 14 Jul - 21 sec - Uploaded by Yonas Kidane An ostrich and baby giraffe play tag - Duration: Parrottrek 1,, views Â·

Ostriches live in grasslands and on Africa's arid plains. The animal's inability to fly would not allow it to survive in a heavily forested tropical.

The ostrich (*Struthio camelus*) is a species of bird that is entirely incapable of flying. Throughout history, these creatures lived north of the desert, however, and savannas, woodlands, desert, plains, semidesert, dry grasslands and scrubs. Explore life in a herd of the world's largest birds. Average life span in The Wild: 30 to 40 years They roam African savanna and desert lands and get most of their water from the plants The ostrich has the largest eye of any land animal.

Ostriches live near grazing animals such as wildebeest, antelopes, and zebras. The grazers stir up insects and rodents for the ostriches to eat, and the ostriches warn the grazers to dangers such as approaching lions. An ostrich group, called a herd, numbers about 12 individuals.

Ostriches are such a unique species, so they have a unique habitat as well! In nature The ostrich likes open, dry grasslands. Their epidermis, body build, and body characteristics allow them to survive in these extreme habitats. Check out the. Ostriches live throughout the continent, yet contrary to common belief, they favor lush grasslands as opposed to deserts. They are generally quiet animals. The ostrich's eye is the largest of any land animal Ostriches live throughout Africa's semiarid plains and woodlands. . Image of a rhino in the savanna. Africa and South Australia in grasslands and arid desert regions. Ostriches live in flocks of varying numbers, 5 to 40 birds when breeding. The ostrich is the fastest two-legged animal in the world and can escape many of its predators.
